Tips for search: how to find necessary articles

▼Change search keywords

Keywords on topics might be too generic or too specific. Different keywords bring different search results. Let's change keywords as follows:

- ① **Change to equivalent or related terms**
 "company" → "corporation" / "organization"
- ② **Change to broader or narrower terms**
 "university" → "school" (broader terms)
 → "national university" (narrower terms)

By rephrasing keywords, you can:

- clarify your question
- focus on the topic

▼Use other databases

HERMES-Search includes Japanese articles, overseas articles and various items as search targets. If your targeted information is specified, using other databases might be more efficient.

- **To search Japanese articles : CiNii Articles**
 CiNii Articles, a free database for Japanese articles, includes more than 20,000,000 bibliographic information. You can use CiNii Articles in cooperation with HERMES-Link on campus (or via MyLibrary if you are off campus). <https://ci.nii.ac.jp/>
- **To search top journals : Web of Science**
 Web of Science includes bibliographic information from international top journals in various fields. You can search relevant articles using rich citation information on campus (or via MyLibrary if you are off campus). <http://www.webofknowledge.com/wos>
